

Welding Engineers can provide complete solutions to any loading bay requirements.

We offer a full range of dock levellers and scissor lifts as well as dock shelters to allow access with a range of vehicle sizes.

### DOCK SHELTERS

Our dock shelters protect goods against all weather conditions as the vehicle reverses into the shelter, sealing it off therefore goods are fully protected during the loading and unloading process. Our dock shelters prevent drafts into your building therefore helping you save on energy costs.

Our inflatable dock shelters provide an effective seal around the vehicle preventing heat or refrigeration loss and maintaining hygienic conditions in food factories.

#### Options include:

- **Fixed or expanding shelters**
- **Inflatable seal**
- **Mechanical dock shelter**
- **Cushion seal**

# DOCK LEVELLERS & SHELTERS

## DOCK LEVELLERS

In the transport industry our stationary dock levellers are crucial for fast loading and unloading.

Our dock leveller bridges the gap and levels out the difference in height between the loading dock and the vehicle deck.

The choice of leveller is normally based on the design of the building, type of vehicles, and quantity of traffic, bed heights as well as the type of handling equipment used for loading and unloading.

### Options include:

- **Manual or hydraulic operation**
- **Traffic lights**
- **Guide rails**
- **Bump stops**

Before designing a new loading bay our engineers would assess your requirements to ensure the system is tailored to suit the needs of your business.
