

Welding Engineers carry out a large range of steel fabrications from small items such as guardrails to structural steel projects. This is made possible by our flexible workforce, fully equipped factory and our computer aided drawing capabilities.

All our vans are fully equipped for site operations including generator welders, mobile access scaffolds and a range of power tools. This enables us to respond to site conditions and requirements and is especially suited where urgent works are required on sites where power may not be available, e.g. gate and fence repairs.

For structural steel projects we can produce fabrication drawings in house on our CAD system, and prefabricate steel sections in our factory. This keeps us in control of lead times and ensures prompt service.

Mild steel products can be provided in a range of finishes including galvanised, painted or powder coated.

We also can fabricate in aluminium and stainless steel for special applications.

A welder wearing a protective mask and gloves is working on a large steel beam. Sparks are flying from the welding point. The image is overlaid with a blue tint.

STEEL FABRICATION

Options include:

- **Structural and secondary steel work**
- **Portal frames**
- **Balustrades**
- **Hand rails**
- **Metal staircases**
- **Decorative panels & railings**
- **Bespoke fabrication**
- **Stainless steel fabrication**
- **Aluminium fabrication**
