

From fire escape doors to sophisticated access controlled entry systems, our steel doors are designed with every application in mind. With the advent of good quality, durable and attractive veneers and laminates into the market the inherent benefits of steel; strength, security and durability can be merged with the aesthetic design appeal of timber to offer doors that can protect from fire and theft whilst also withstanding the day to day rigours of the 21st century without rusting warping or rotting and also withstand infestation by vermin and insects.

Standard sizes and specification are available on a short lead time basis; in instances where security is paramount we can provide a temporary door system whilst a permanent replacement is in manufacture. Stock doors can be modified to suit non standard openings, either cut down for short openings or filled with infill panels for taller ones. We can also custom size doors to suit any openings up to 2600mm x 2960mm.

Our steel doors are built using high quality components and finished to the highest standards.

### **Standard Features include compliance with:**

- **BS EN 1935 – Hinges**
- **BS EN 103 – Cylinders and lock cases**
- **BS EN 1154 – Door closers**
- **BS EN 1123 – Panic hardware**
